Joint event:

7th Regional Symposium on Electrochemistry - South East Europe (RSE–SEE 7) and 8th Kurt Schwabe Symposium

Višnja Horvat-Radošević^a and Zoran Mandić^b

^a*Ruđer Bošković Institute, Bijenička 54, Zagreb, Croatia*

^b*Faculty of Chemical Engineering and Technology, University of Zagreb, Marulićev trg 19, Zagreb, Croatia*

This special issue of *jESE* contains a collection of articles that were originally presented at 7th Regional Symposium on Electrochemistry-South East Europe (RSE–SEE 7) that was held jointly with 8th Kurt Schwabe Symposium, on 27-30 May 2019, in Split, Croatia. This gathering was intended to facilitate exchange of ideas and collaborations among experts, engineers and beginners in the field of electrochemistry.

The joint 4-day symposium was organized by the Association of South-East European Electrochemists (ASEEE) <http://www.aseee.eu> and gathered 176 participants from 23 countries, giving in total 5 plenary talks, 10 keynote talks, 65 oral presentations and 64 poster presentations. Also, the Satellite Student Symposium with 14 contributions was associated to the main symposium event. The Book of abstracts can be downloaded from here: <http://www.aseee.eu/userfiles/rse-7/Book-of-abstracts.pdf>.

The conference was dedicated to the memory of late Professor Zdravko Stoynov (1936–2017), a world distinguished Bulgarian electrochemist and one of the founders of the regional cooperation of electrochemists, established in 2008 through RSE–SEE chain of conferences.

The conference was aimed to highlight advances and new findings in electrochemistry area and its impact on technology development. In the year of Nobel prize–electrochemistry winners who developed Li-ion batteries and created a rechargeable world, it is of special importance to emphasize that the present symposium topics were: Batteries and electrochemical energy storage, Corrosion science and protection, Electrochemical engineering, Electroanalytical chemistry and sensors, Organic electrochemistry and bio-electrochemistry, Physical electrochemistry, Materials and electrochemical processing and General topics. This broadness of topics is reflected in this issue with papers not only on the basics of energy storage and energy storage devices such as batteries and fuel cells, but also on electrochemical sensing technologies, electrolytic production of metals, electrochemical synthesis for various purposes and corrosion inhibition.

Extended versions of 4 plenary, 4 keynote and 6 contributed presentations can be found in this special *JESE* issue, together with the list of authors and titles of abstracts presented at the conference. Each published paper successfully passed the reviewing process that involved the participation of prominent international scientists.

As the Editors of this special issue of *JESE*, we would like to express sincere appreciation to all those who had contributed in producing it. Special thanks are going to the authors of contributions for their state-of-the-art articles and reviewers for their timely reviewing and valuable comments.

We hope that readers will find this special issue interesting and valuable. We are also convinced that it will be beneficial for a wide audience in academy and industry.

List of authors and titles of abstracts submitted to RSE-SEE 7 and 8th Kurt Schwabe Symposium
(sorted alphabetically by the first author)

Plenary lectures (5)

- Miran Gaberšček, Sara Drvarič Talian, Jože Moškon, Jan Bitenc, Alen Vižintin, Robert Dominko. Reaction and transport mechanisms in lithium-sulfur batteries.
- Francois Lapicque. Electrolytic iron production from alkaline suspension of solid oxides: compared cases of hematite, iron ores and iron-containing processing waste.
- Arjan Mol (J.M.C. Mol). In-situ electrochemical, microscopic and spectroscopic studies of local corrosion and buried metal-polymer interfaces.
- Pavel Shuk, Hans-Ulrich Guth, Chad McGuire. [Gas sensing technologies in combustion: a comprehensive review.](#)
- Daria Vladikova, Blagoy Burdin. Advancement in the electrochemical testing and characterization of power sources.

Keynote lectures (10)

- Jiří Barek. [Novel electrode materials and arrangements for sensing biologically active organic compounds.](#)
- Jenia Georgieva, Nina Dimitrova, Sotiros Sotiropoulos, Tzvetanka Boiadjeva-Scherzer. A new environment-sparing method for preparation of nanomaterials applicable in fuel cells and electrolyzers.
- Anton Kokalj, Ingrid Milošev. Molecular modeling of corrosion inhibitors: a search for physically sounds descriptors.
- Jiří Ludvík, Alan Liška. Stereoelectrochemistry of reducible calix[4]arenes.
- Nicolas Murer, Jean-Paul Diard, Bogdan Petrescu. The effects of time-variance on impedance measurements: examples on a corroding electrode and a battery cell.
- Géza Nagy, Livia Nagy, Andras Kiss, Daniel Filotás, Abdelilah Asserghine, Ricardo M. Souto. [Results achieved fitting to- and using SECM in corrosion experiments.](#)
- Nebojša D. Nikolić. Formation of disperse deposits by electrolysis: morphology, structure and mechanism.
- Helena Otmačić Čurković, Ekatarina Kristan Mioč, Zana Hajdari Gretić. Comparison of the protective properties of fatty acid films prepared by different application methods.
- Tamás Pajkossy, Soma Vesztergom. A fifty-years old problem re-visited: the voltammograms of diffusion controlled reactions.
- Igor A. Pašti. Computationally driven development of novel electrocatalysts.

Oral presentations (65)

- Ilona Acznik, Katarzyna Lota. The influence of conductivity and pH on the performance of electric double layer capacitors working in neutral electrolytes.
- Veronica Anăstasoae, Laura Enache, Mihaela Cristea, Raluca Isopescu, Gabriela Stanciu, Eleonora-Mihaela Ungureanu. Electrochemical properties of substituted thioxothiazolidin-azulene.
- Liana Anicai, Stefania Costovici, Aurora Petica, Sabrina Rosoiu, Aida G. Pantazi, Teodor Visan. Electrodeposition of Sn binary and ternary alloys involving deep eutectic solvents.
- Josefina Ballarre, Tuba Ademir, Liliana Liverani, Aldo R. Boccaccini. Sol-gel spray and electrophoretic deposition techniques to enhance bioactive and antibacterial response of titanium implants.
- Viaceslav Barsukov, V. Khomenko, Oksana Butenko. On the validity of using the diffusion coefficient in characterization of charge transfer reactions in systems with a solid-phase reagent.
- Galin Borisov, Denis Paskalev, Katerina Maksimova-Dimitrova, Elitsa Petkucheva, Evelina Slavcheva. Highly efficient carbon-free membrane electrode assemblies for electrolysis cells with anion exchange membrane (AEMEC).
- Blagoy Burdin, Dimitar Bojchev, Daria Vladikova. Introduction of differential resistance analysis in battery testing.
- Barbara Burnat, Andrzej Leniart, Sławomira Skrzypek. Functionalization of titanium dioxide coatings for biomedical applications – corrosion impact study.
- Manfred Decker, Arnold Wezel, Robert Hasler, Petra Teichmann, Michael Schneider, Winfried Vonau. Investigations about the simultaneous potentiometric determination of pH-value and potassium amount in freshly sampled soil on-site on the field.
- Nils Donker, Anastasiya Ruchets, Daniela Schönauer-Kamin, Jens Zosel, Ulrich Guth, Ralf Moos. Pulse polarization measurements on the system Pt|YSZ by varying the polarization voltage.
- Matija Gatalo, Leonard Moriau, Francisco Ruiz-Zepeda, Primož Jovanovič, Urša Petek, Nejc Hodnik, Marjan Bele, Miran Gaberšček. CO-assisted ex-situ chemical activation of gram-scale high-performance Pt-Cu/C ORR electrocatalyst.
- Bernhard Gollas, David Fuchs, Bernhard C. Bayer. Electrochemistry of macroscopic CVD-Graphene on non-conducting substrates in deep eutectic solvents.
- Rui Gusmão, Zdeněk Sofer, Martin Pumera. The advent of 2D layered materials for electrochemical energy applications.
- Thomas Herl, Daniel Böhm, Frank-Michael Matysik. Electrooxidation of nucleobases on disposable electrodes investigated by electrochemistry-capillary electrophoresis-mass spectrometry.
- Alexander Herms, Jingying Yao, Jens Zosel, Wolfram Oelßner, Michael Mertig. Coulometric titration of oxygen in the picomol range.
- Nejc Hodnik, Matija Gatalo, Francisco Ruiz-Zepeda, Andraž Pavlišič, Primož Jovanovič, Marjan Bele, Goran Dražić, Miran Gaberšček. Tracking and modeling of PtCu nanoalloy dealloying at the atomic-scale: spot the difference “game” at the atomic level.
- Magdaléna Hromadová, Viliam Kolivoška, Jakub Šebera, Táňa Sebechlebská, Jindřich Gasior, Štěpánka Nováková Lachmanová, Gábor Mészáros, Marcin Lindner, Marcel Mayor, Michal Valášek. Effect of tripodal anchoring groups (meta versus para position) on the charge transport in single oligophenylene molecular wires.
- Jelena Isailović, Vasko Jovanovski, Primož Jovanovič. Development of hydrogen peroxide gas sensor for security applications.

- Kaewta Jetsrisuparb, Sawitta Triamthaisong, Nontipa Supanchaiyamat, Andrew Hunt, Wirat Jarernboon, Chaiyaput Kruehong, Pornnapa Kasemsiri, Prinya Chindaprasirt. Porous composite electrode from pyrolyzed rice husk for rechargeable zinc battery.
- Primož Jovanovič, Kevin Stojanovski, Marjan Bele, Luka Suhadolnik, Goran Dražić, Gorazd Koderman Podboršek, Miran Gaberšček, Nejc Hodnik. Novel methodology for investigating electrochemical gas evolution reactions: a case study of oxygen evolution reaction using floating electrode for effective oxygen bubble removal.
- Vasko Jovanovski, Nana Ivana Hrastnik, Urša Klun. Insights into copper film electrodes for voltammetric determination of trace toxic elements.
- Jesper T.N. Knijnenburg, Napapon Massa-Angkul, Kaewta Jetsrisuparb. One-pot synthesis of CNT/Ni electrocatalysts using electrophoretic deposition.
